WHAT IS CLAIMED IS:

An image data processing system comprising:

a digital camera having a camera section for converting a

light from a substance to be recorded into an image data, and a

first\memory section for storing said image data therein;

5 first processing means, for storing the image data, provided

outside said digital camera and having a second memory section for 6

storing said image data therein;

second processing means for processing said image data in accordance with instructions from said first processing means;

communication apparatus having communication sections which transmit and receive data, said communication sections being provided for said digital camera, said first processing means and said second processing means, and communication circuits for connecting said communication sections to each other; and

instruction means for giving instructions on processing to be executed by said first\processing means from said digital camera.

- 1 The image data processing system according to Claim 1, wherein
- 2 said second processing means\includes a print section for printing
- the image. 3
- The image data processing system according to Claim 2, wherein 1
- 2 said second processing means includes a third memory section for
- 3 storing the image data.

- The image data processing system according to Claim 3, wherein 1
- 2 the system includes a plurality of said second processing means
- and said digital camera includes selecting means for selecting said 3
- second processing means. 4
- 5. A digital camera comprising: 1
- 2 a camera section for converting a light from a substance to
- 3 be recorded into an image data;
- 4 a memory section for storing said image data therein;
- instruction means for instructing processing means on
 - processing to be executed disposed outside the digital camera and
 - having a second memory section for storing said image data therein;
 - and
- □ 以 9 a connecting section for connecting with communication IŲ
- ₽10 circuit capable of transmitting the instructions from said
 - instruction means and said image data.
 - 1 A processing device for executing processing in accordance
 - 2 instructions from a digital camera provide outside,
 - 3 comprising:
 - reception means for teceiving the instructions from said 4
 - 5 digital camera;
 - 6 a memory section for storing image data transmitted from said
 - 7 digital camera; and
 - 8.. output means for outputting said image data to external

9 processing device disposed outside in accordance with the 10 instructions from said digital camera that have been received by 11 said reception means.
